

1.

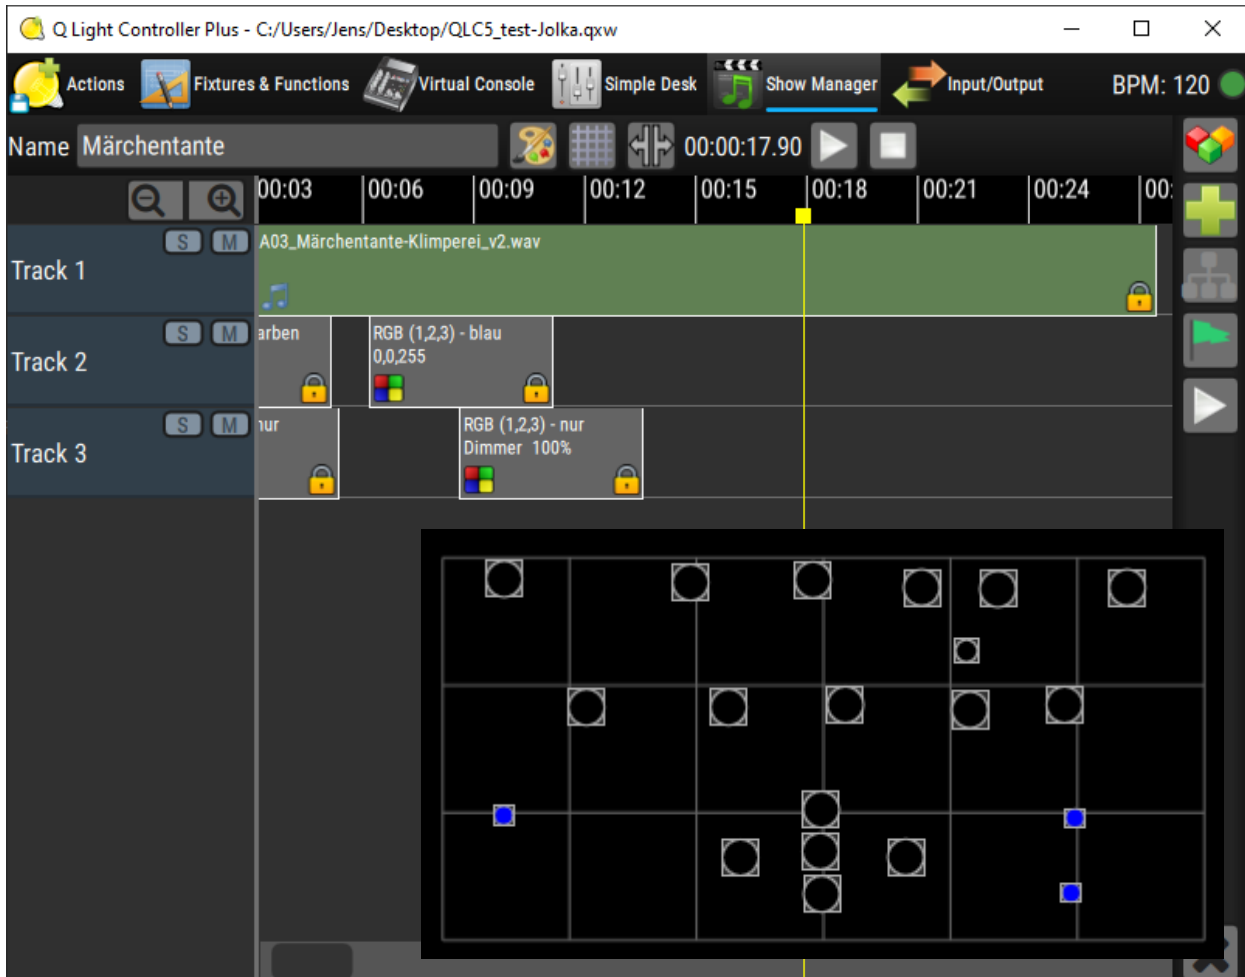

It would be nice to have the waveforms displayed in the sound files...

and the fade In / fade Out lines.

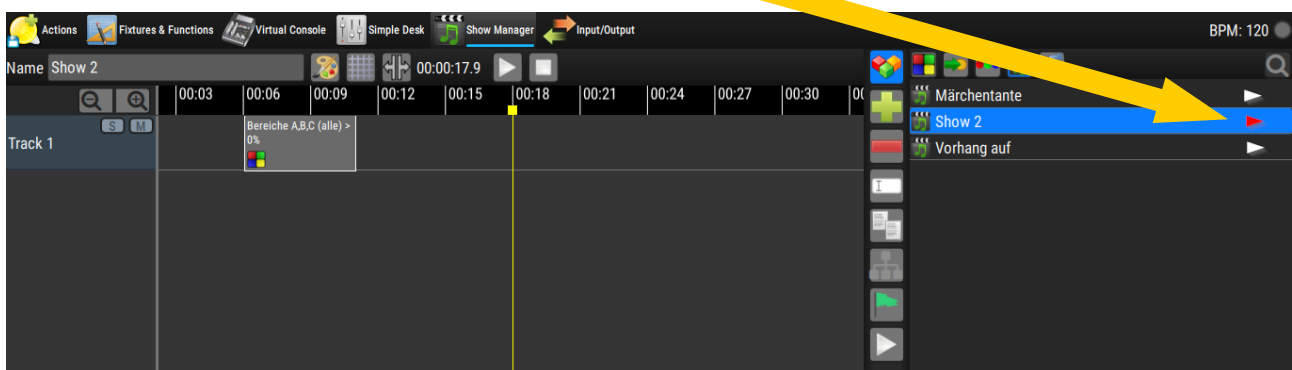

2.

Is it possible that the monitoring of the lamps will be displayed in a small screen in the ShowManager directly? This would be more helpful to see what will be happen.

3.

The next idea I have is, on the right side I see all my created „shows“ and I could start the selected show directly – „press the arrow on the right“ –

and , if the show is finished, the next show list entry should be selected.

4.

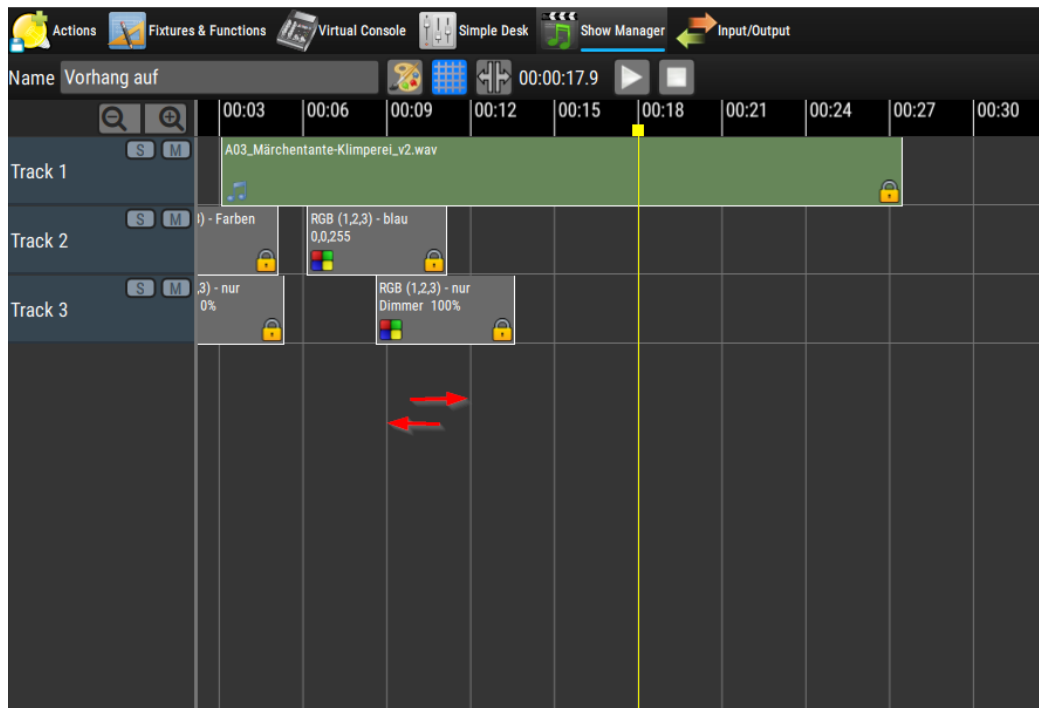

All shows should be displayed in a show-list and it should be possible to set the shows on a fixed position

That means, If I have (for example) 40 shows, I give every show entry a number. Regarding these numbers, the shows will be displayed in a list.

The advantage is, I start a show and have the following show displayed directly below.

5.

The grid should be more flexible.

In summary I can say, I like this 1st version of the QLC+5 and I hope you will improve it more and more and you will provide the next version in a short time.

Masimo, thank you for your work and I wish you a nice christmas time and a happy new year!!!

Best regards

Jens
