

Hello, I am french, so Sorry for my poor english

I have a suggestion

in the virtual console there is the widget slider **(1 in screen 1)**

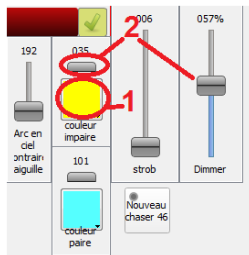

I discovered a nice option but it need a small improvement
if in the properties of the slider in the "level" is selected "Gobo /
Effect / Macro" **(2 in screen 1)**

Screen 1

appears under the cursor one button. **(1 in screen 2)**

in play mode virtual console if you click on this button appears a frame with colors (if the slider is assigned to the
projector's color channel) **(1 in screen 3)**

Screen 2

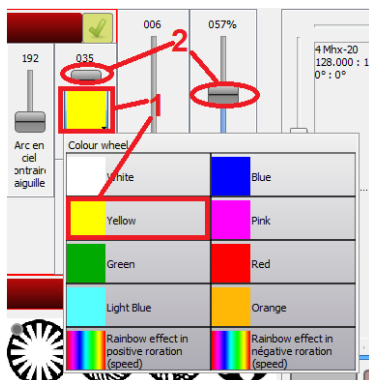

suddenly the cursor slider is no longer necessary **(2 in screen 2)**

my request as follows: in the properties of the slider, if you select "Gobo / Effect / Macro" have a checkbox to hide
the slider cursor **(2 in screen 3)**

on my screenshots I minimized cursor size but it remains a small piece **(2 in screen 3)**

Screen 3

I hope that my explanation is clear and it will be retained for a future release

Thank you very much for your really great job in this software
